NESTED LOGIN VALIDATOR

```java
public class NestedLoginValidator {
    public static void main(String[] args) {

        String username = "admin";
        String password = "1234";
        boolean isLocked = false;

        if (username.equals("admin")) {
            if (password.equals("1234")) {
                if (!isLocked) {
                    System.out.println("Login Successful!");
                } else {
                    System.out.println("Login Failed: Account is locked.");
                }
            } else {
                System.out.println("Login Failed: Incorrect password.");
            }
        } else {
            System.out.println("Login Failed: Incorrect username.");
        }
    }
}
```

```
Login Successful!

[Program finished]
```
