COMPOUND GROWTH & INCREMENT TRACKER

```java

public class CompoundGrowthIncrementTracker {
    public static void main(String[] args) {
        double balance = 1000.0;

        balance += 500;
        System.out.println("After adding 500: " + balance);

        balance *= 1.10;
        System.out.println("After 10% growth: " + balance);

        balance += 200;
        System.out.println("After adding 200: " + balance);

        int count = 5;

        System.out.println("Postfix count++: " + count++);
        System.out.println("Count after postfix: " + count);

        System.out.println("Prefix ++count: " + (++count));
        System.out.println("Count after prefix: " + count);

        // Postfix uses the current value before incrementing.
        // Prefix increments first, then uses the new value.
    }
}
```

```
After adding 500: 1500.0
After 10% growth: 1650.0000000000002
After adding 200: 1850.0000000000002
Postfix count++: 5
Count after postfix: 6
Prefix ++count: 7
Count after prefix: 7

[Program finished]
```
