PRECEDENCE PUZZLE SOLVER

```java

public class PrecedencePuzzleSolver {
    public static void main(String[] args) {
        int a = 5, b = 3;

        
        boolean result1 = a + b * 2 > 10 && a < 6;
        System.out.println("Expression 1: " + result1);

        int x = 4;
        boolean result2 = ++x > 4 || x++ < 5;
        System.out.println("Expression 2: " + result2);
        System.out.println("Value of x: " + x);

        int y = 3;
        boolean result3 = y++ > 3 && ++y == 5;
        System.out.println("Expression 3: " + result3);
        System.out.println("Value of y: " + y);

        // If a prediction is wrong, check operator precedence
        // and short-circuit evaluation of && and ||.
    }
}
```

```
Expression 1: true
Expression 2: true
Value of x: 5
Expression 3: false
Value of y: 4

[Program finished]
```
