UNIT CASTING CONVERTER

```java

public class UnitCastingConverter {
    public static void main(String[] args) {

        
        double centimeters = 275.8;

        int wholeMeters = (int) (centimeters / 100);

        double remainingCm = centimeters - (wholeMeters * 100);

        System.out.println("Centimeters: " + centimeters);
        System.out.println("Whole meters: " + wholeMeters);
        System.out.println("Remaining centimeters: " + remainingCm);

        // Implicit widening: int to double
        int number = 25;
        double widenedNumber = number;

        System.out.println("Implicit widening: " + widenedNumber);

        // Explicit narrowing: double to int
        double decimalNumber = 12.75;
        int narrowedNumber = (int) decimalNumber;

        System.out.println("Explicit narrowing: " + narrowedNumber);
    }
}
```

```
Centimeters: 275.8
Whole meters: 2
Remaining centimeters: 75.80000000000001
Implicit widening: 25.0
Explicit narrowing: 12
