SEARCH & SORT MINI-TOOL

```java

import java.util.Arrays;
import java.util.Scanner;

public class SearchSortMiniTool {
    public static void main(String[] args) {

        Scanner input = new Scanner(System.in);

        int[] scores = {85, 85, 92, 88, 76, 95, 80, 90};

        System.out.println("=== SEARCH & SORT MINI-TOOL ===");
        System.out.println("Original scores: "
                + Arrays.toString(scores));

        System.out.print("Enter the score to search for: ");
        int target = input.nextInt();

        // Linear search checks each element one by one.
        int index = -1;

        for (int i = 0; i < scores.length; i++) {
            if (scores[i] == target) {
                index = i;
                break;
            }
        }

        if (index != -1) {
            System.out.println("Score found!");
            System.out.println("Index: " + index);
        } else {
            System.out.println("Score not found.");
        }

        // Sort a copy so the original array stays unchanged.
        int[] sortedScores = Arrays.copyOf(
                scores, scores.length);

        Arrays.sort(sortedScores);

        System.out.println("Original array: "
                + Arrays.toString(scores));
        System.out.println("Sorted array: "
                + Arrays.toString(sortedScores));

        input.close();
    }
}
```

=== SEARCH & SORT MINI-TOOL ===
Original scores: [85, 85, 92, 88, 76, 95, 80, 90]
Enter the score to search for:
